Employment History

Web Developer - May 15, 2017 - Current

Fathead LLC (fathead.com) Detroit, MI

- Creation and development of website for a new branch of company products, built with VueJS. Includes backend and CMS integration via API requests.
- Manipulation of data from backend systems to display content in a meaningful way to end users, implementing UI and UX principles to ensure pleasant interaction with applications.
- Primary developer in charge of website's main CSS and Javascript, including making updates, improvements, and maintaining version control using Git.
- Adding new functionality to the website to improve user experience, using Javascript, CSS, and Vue JS.
- Development of site's navigation and customizer using Vue JS, ensuring responsiveness as well as desired functionality and styling, based on requirements from marketing team.
- Making improvements to the development process by implementing workflows using version control systems.

UI/UX Developer - September 2016 - May 2017 (Contract Position)

Jackson Dawson (jacksondawson.com) Dearborn, MI

- Design and development of public facing sites for major clients, such as Lincoln, Ford, and Honda.
- Extensive use of HTML, CSS, Javascript, and JQuery in the development process of websites.

May 2015 – September 2016: Front End Developer

Deepgram (deepgram.com) San Francisco, CA

- Worked remotely on an as needed basis using HTML, CSS, JavaScript, and JQuery extensively.
- Developed front end of website to demonstrate company's API product to venture capitalist investors.

Education

Michigan State University; East Lansing, MI   Graduated April 2016

Bachelor of Science: Media and Information

Concentration: Interactive and Social Media, Server and Client-Side Web Development

Relevant Hobbies and Interests

I love technology, and am always interested to hear about new ideas, products, and software. I also enjoy running, being outside, and playing video games in my free time.

I have participated in several hackathons, including MHacks at The University of Michigan, and Spartahack. At Spartahack, MSU's hackathon, I participated in the event, as well as volunteered to direct students in their pursuit of projects. I also enjoy participating in local events through groups such as Detroit JS.

I was a member of MSU's Design for America studio, which is one of the many student-led studios across the country that aim to use design to solve problems in their local communities. I currently enjoy volunteering in the Detroit area, helping to maintain and improve the many urban gardens that help provide food to local communities.
